

Rod Seal XSRs17C

Function:

Rod seals are designed to seal the pressurized hydraulic fluid against the atmosphere, preventing leakage and pollution of the environment.

Features:

- Asymmetrical, single acting rod seal, designed with interference on the OD which provides a good static fit in the groove.
- Dynamic sealing lip shorter than static lip to avoid drag pressure.
- Increased preload due to an additional O-Ring.
- Activated back-up ring prevents and reduces gap extrusion.
- Secondary lip for stabilising at large seal heights and reducing the residual oil film.
- Excellent static and dynamic sealing performance.
- Excellent performance in all pressure ranges.
- No reverse leakage when changing direction.
- Recommended for positioning or holding under pressure.

Application:

Reciprocating rods in hydraulic cylinders, plungers, push rods, telescopic cylinders, fittings, etc.

Switching or clamping functions.

Max. pressure 700 bar, max. speed 0.5 m/s.
